

## **IEnova unveils its Rumorosa Solar park in Baja California and announces new Investment on the state**

**Tecate, Baja California, November 13, 2019** – Infraestructura Energética Nova, S.A.B. de C.V. (“IEnova”) unveiled today its new solar park, Rumorosa Solar, in Tecate, Baja California. With an approximate investment of 960 million pesos and an installed capacity of 41MWAC, Rumorosa Solar has an equivalent capacity to deliver clean energy to 70,000 homes. With 165,510 new state-of-the-art solar panels, constructed in a 135 hectares parcel, this project created more than 800 direct and indirect jobs during its construction phase.

The inauguration ceremony included the participation of Baja California’s governor, Jaime Bonilla Valdez; Francisco Cervantes, National President of the Mexican Industrial Chamber Confederation (Concamín); Carlos Ruiz Sacristán, Chairman of the Board of Directors of IEnova; Tania Ortiz Mena, Chief Executive Officer of IEnova, Zulema Adams Pereyra, Municipal President of Tecate; as well as the representative of the federal, state and municipal government and the Lic. Benito Juárez García community.

*“Baja California has been essential in IEnova’s success story”* mentioned Tania Ortiz Mena, *“In this entity, we have projects in all of the business lines where IEnova is involved in, from natural gas distribution to clean energy generation. Also, we are investing in two other projects in the state and want to develop, here in Baja California, the biggest project in IEnova’s history: a liquefaction plant in our existing ECA facilities. With these projects, in the upcoming years, we would be investing more than what we have invested in the state over the past 20 years”*, she added.

Nowadays, IEnova has a renewable energy portfolio with an installed capacity of more than 1,000 MW, which positions the company as one of the main players in the clean energy generation space in Mexico. Its portfolio consists of 2 operating wind farms (Ventika and Energía Sierra Juárez); 3 operating solar parks (Rumorosa Solar, Tepezalá Solar and Pima Solar); a well as 2 solar parks (Don Diego Solar and Border Solar) and 1 wind farm (Energía Sierra Juárez II) under construction / development.

*“Baja California’s future development requires investments in energy infrastructure that will provide safe, reliable, clean and accessible energy for industrials and residential consumers. This facility we are unveiling today, with an approximate investment of 960 million pesos, confirms the commitment IEnova has in Baja California and in Mexico”*, Tania Ortiz Mena pointed out.

Likewise, the president of Benito Juárez García town, José Maciel, took the floor in name of the rightsholders of the communal lands to point out that Rumorosa Solar represents a safe and constant income to all the rightsholders of the land for the next two decades in one of the most

inhospitable regions of the state. He also made the request to all government levels to continue promoting investments in the clean energy space in the region.

This project confirms IEnova's commitment with the development of energy infrastructure in Mexico and consolidates it as one of the leading clean energy generation companies in the country.
